

software project-1

Project Report

Project name: Library management system.

Tools: HTML, CSS, SQL, JavaScript.

Project Idea: My project idea is to create an application that can provide library management system easier.

Project description: In this application the front Page will open by welcoming an user. If the user have no account in this application then the user have to create account on it and if the user already have an account then they can Login to it directly. For sign up an user have to Put the name, email and password in it. After login an user can search the book that he want. In this application there is a side bar that provides an user the information about the app and gives some supports and it is useful for log out. After selecting a book an user can see

the amount of the book and have to confirm the he will buy the book or he will take the book for read someday. If the user wants to buy the book the payment method will show. An user can pay by cash, card or bKash. If he want to take this book for reading then he have to put his name, Id, section, Department.
